PROFESSIONAL SUMMARY

QA engineer who builds AI agents that do the QA work: they check that the code meets what was requested, run the tests and file the bugs in Jira.

Since 2020 at Sociedad Portuaria Regional de Cartagena, automating tests for business-critical web applications with Selenium, Playwright and TestComplete, covering functional and REST API testing in an agile (SCRUM) way. My current focus is Agentic QA: AI agents that cover the testing cycle, plus a platform that generates test cases and acceptance criteria in Jira and Confluence. Because I also develop (React, Node.js, TypeScript), I build my own tools.

SKILLS

Agentic AI: Agentes de IA autónomos, MCP (Model Context Protocol), Agentes de voz en tiempo real (Gemini Live API, WebSocket), Flujos de pruebas por nodos, LLMs (Claude, Gemini, GPT, OpenAI).

Test automation: Playwright, Cypress, TestComplete, Selenium WebDriver, Postman, Pruebas funcionales, Pruebas de APIs REST.

Development: TypeScript / JavaScript, React, Node.js, Express, Java, SQL, MongoDB, Python.

Tools and methods: Jira, Confluence, Git, Docker, Metodologías ágiles (SCRUM).

WORK EXPERIENCE

Senior QA Automation Engineer | Sociedad Portuaria Regional de Cartagena | 2020 – present

Internal title: Software Testing Analyst, level N3 (equivalent to Senior QA Automation Engineer).

Agentic QA

- Bug Hunter (Cazador de Bugs): an AI agent that checks the code delivered by the developer against the acceptance criteria and verifies that what was built includes what was requested.
- Execution agent: runs the tests autonomously.
- Reporting agent: autonomously files test cases and bugs, with their fixes, in Jira.
- Playwright Workflow Builder: tests are built by dragging nodes, n8n style (for example login or adding to the cart), and chained into a single flow.
- Chatbot that runs automated Playwright tests from natural language.
- MCP (Model Context Protocol) with Playwright for intelligent, autonomous testing.

Automation and platforms

- Design and implement test automation with Selenium, Playwright and TestComplete for business-critical web applications, including functional and REST API tests, working in agile (SCRUM).
- Lead the development of an AI platform that generates test cases and acceptance criteria and documents them in Jira and Confluence.
- Built a synthetic-data tool with LLMs that addresses privacy concerns and improves staging environments.
- Built a web application that turns test cases written in natural language into ready-to-run automated scripts.

Systems Analyst | Calzado Latino | 2017 – 2019

- Developed desktop features in VB .Net and managed SQL Server databases.
- Provided internal Helpdesk support: hardware, software and corporate application incidents.
- Built reports and Excel automations with macros and VBA that streamlined repetitive tasks.

PROJECTS

- Conversational AI Avatar (digital clone): Voice assistant with a 3D avatar and real-time lip sync, connected to MCP servers and to Gmail, Calendar, Contacts, Drive and Tasks. Works by phone and on a smartwatch; sensitive actions require spoken confirmation and it never makes up data when a tool fails. Demo: https://cv.edudev.biz
- Bug Hunter (Cazador de Bugs): AI agent that checks the source code delivered by the developer against the acceptance criteria to verify that what was built includes what was requested.
- Autonomous Test Execution Agent: AI agent that runs the tests autonomously.
- Jira Bug Reporting Agent: AI agent that autonomously files test cases and bugs, with their fixes, in Jira.
- Playwright Workflow Builder: Visual test builder, n8n style: each test is a node and they are chained by dragging and connecting.
- AI Test Case Generator: Test cases from requirements with LLMs and export to Jira. Demo: https://ai-test-cases-generator-bay.vercel.app
- AI Script Generator Playwright: Playwright scripts from natural language. Demo: https://playwright-ai-wlz9.vercel.app
- AI Test Data Generator: Synthetic, anonymous test data with LLMs. Demo: https://tdm-generator-ai.vercel.app

EDUCATION

- Systems Engineering - Universidad de Cartagena (2016)
- Full Stack Web Developer (TypeScript/JS, React, Node.js, Express, MongoDB, SQL, Java) - Bootcamp Coderhouse (2024)

LANGUAGES

- Spanish: Native
- English: Basic (A2)

AVAILABILITY AND GOALS

Near-immediate. Remote, hybrid or on-site. Colombian citizen without a work permit in Spain or the EU: looking for companies willing to sponsor the permit and relocate him with his family.

Target roles: QA Automation Engineer, SDET, Agentic QA Engineer, AI Test Engineer, Conversational AI / voice agents engineer.
